Where science meets consciousness...

Understanding Wireless Radiation and How to Protect Ourselves

With Beverly Rubik, Ph.D. & Harry Jabs, M.S.

What do cell phones, wireless internet, cordless phones, cell phone towers, “smart” meters, and “smart” home appliances have in common? They all emit radiofrequencies (RF). Moreover, these devices are all around us and are affecting our health in profound ways. With the proliferation of wireless technology and our increasing exposure to RF, people are experiencing greater stress and have headaches, fatigue, and low energy, symptoms often associated with chronic radiation sickness. A new syndrome--Electromagnetic Hypersensitivity Syndrome--affects an estimated 25% of the population, with 3% severely affected. We will demonstrate RF exposure with field meters that we will bring to measure your portable device emissions. We will explain more about the health consequences of exposure as documented in scientific and medical studies. Although there is no practical way to eliminate these wireless fields completely from our lives, we will discuss ways in which we can significantly reduce our exposure and protect ourselves. We will also discuss the so-called “protective” devices sold in the marketplace and our independent test results on several such devices.

Beverly Rubik earned her Ph.D. in biophysics at the University of California at Berkeley. She is internationally renowned for her research at the cutting edge of science and medicine and has received several awards for her research. Since 1996, she is president/founder of Institute for Frontier Science in Emeryville, a nonprofit laboratory. She serves on the editorial boards of the Journal of Alternative and Complementary Medicine; Evidence-Based Integrative Medicine; and The Journal of Vortex Science and Technology. She is a professor at Energy Medicine University; adjunct professor at California Institute of Integral Studies and Saybrook University; a consultant to industry on maverick wellness products; and a holistic health practitioner advising clients on enhanced self-care.

Harry Jabs, M.S., was educated as an experimental physicist and holds 2 Masters degrees, one from DESY in Germany (German Electron Synchrotron) and the other from Texas A&M University, where he conducted research on cold fusion and nuclear physics. Presently he is a senior scientist at Institute for Frontier Science in Emeryville, CA, a nonprofit laboratory conducting pioneering research. Harry is a multidisciplinary scientist and engineer with expertise in physics, chemistry, biochemistry, electronics, mechanics, material science, and software engineering. He is passionate about developing new technologies that some people might consider impossible.
